

Accepted Names in the Genus *Acer* - An Update

By Koen Camelbeke

These are strange and challenging times. But at least one challenge has been completed successfully: the list of accepted names in the genus *Acer* is now finished and has been published in this edition of the Newsletter, and on the Society website, <https://maplesociety.org/en-gb/content/accepted-names-genus-acer>. Starting with *Acer acuminatum* and ending with *Acer yui* (yes, we are definitely in need of a species name starting with "z" !) we arrive at 156 species and 94 infraspecific names: so 250 accepted names in total. This work is the result of a joint effort of the members of the "species group": Tony Aiello; Hugh Angus; Dan Crowley; Douglas Justice; and myself. Of course, it was improved and corrected thanks to the input of several maple specialists and growers, and I would like to thank them all for their help in achieving this goal!

Needless to say, as soon as a names list is published, it becomes outdated. Moreover, taxonomy and the defining of groups is, in part, a subjective process so there can always be and remains a discussion about this or that name. Most importantly, an accepted names list is finally available, and we remain of course always open to comments and improvements to this list! This will never be a static document, so regular updates will be published whenever needed.

The next step, of course, is now to publicize this list for anyone who is involved in some way with maple names to pick it up and use it as a standard. We will have to share them with organizations such as World Flora Online, Trees and Shrubs Online, IUCN Red List Authority, World Checklist of Selected Plant Families, Germplasm Resources Information Network, etc. I suppose an official launch must be foreseen in the near future!

And I quietly dream of a database with a lot of extra information per name; just think of a distribution map, illustrations, Red List assessment, infrageneric classification, a description,... the possibilities (and challenges) seem endless and the oaknames.org website can be a good example.

In the meantime, the next big step has been taken and Dan Crowley has started drawing up a synonym list. The intention is to have a complete, comprehensive list of *Acer* names with reference to the accepted name. This is a big job and I thank the Maple Society as well as the North American Branch for their help and support with this new phase. Let's make hay while the sun shines!
